Leveraging Social Media Analytics For Informed Transportation Planning

Slot No.:

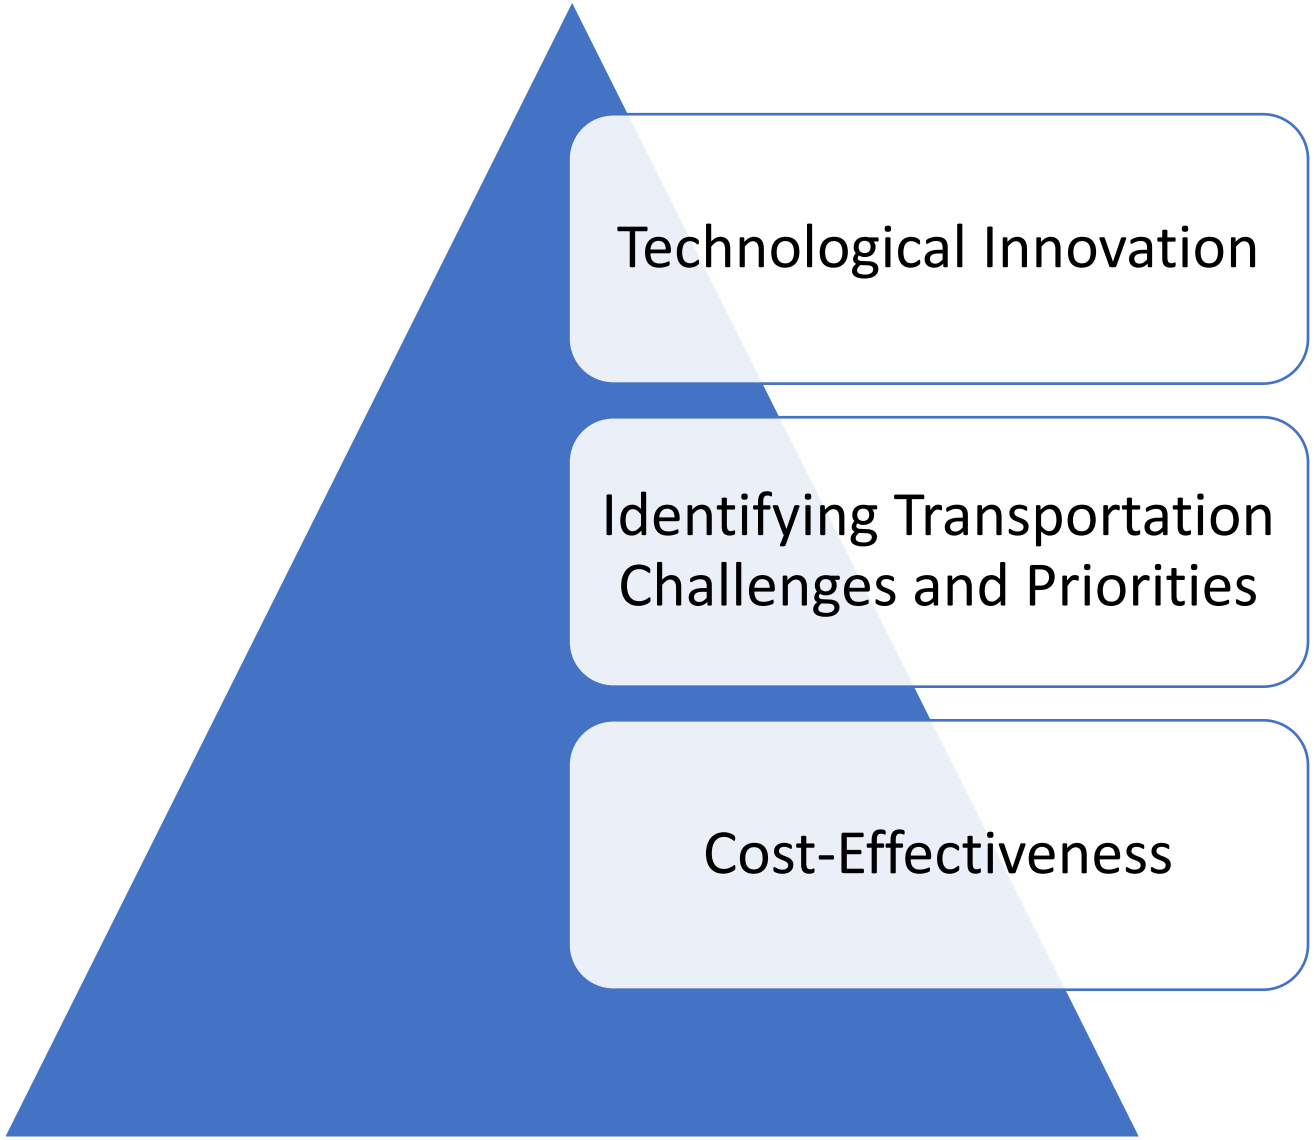
Introduction to Transportation management using Social Media Analytics

Social media data offers valuable insights for urban planning.

Citizen voices are incorporated into the planning process.

This leads to development of efficient, equitable, and sustainable transportation systems.

BENEFITS



Technological Innovation
Identifying Transportation Challenges and Priorities
Cost-Effectiveness

Grid Pattern

Grid pattern has an inherent benefit, that to go from point A to point B, you have multiple paths and the traffic gets distributed. Whereas, in the Star pattern there is almost always just one (or two) main ways to go from point A to point B which congregates the traffic coming from sub-streets onto one main road

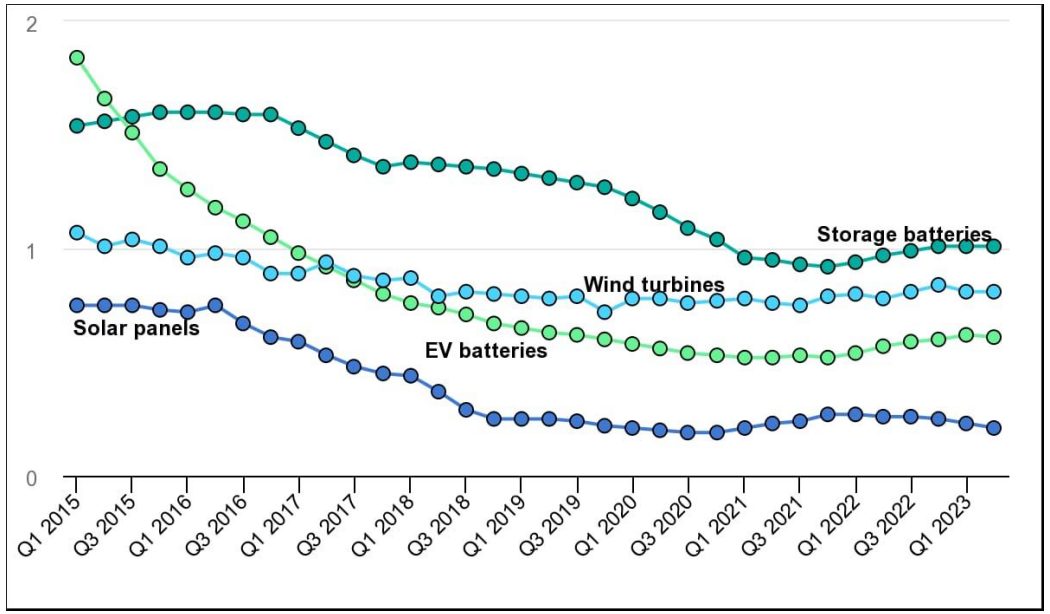
Underground-Parking

Underground parking innovations like real-time vacancy detection and automated systems stream drivers to available spaces, optimizing space usage, and enhancing traffic flow.

Ring Road

Ring roads can solve traffic problems by:* *Diverting traffic away from city centers.** *Improving traffic flow and reducing travel times.** *Reducing congestion and emissions.*

Solving the problem of EV with the help of Solar Energy



Max Shah @StockMarketInd3 · Oct 19

Environment?
We don't have green energy hence to produce electricity enough pollution is done.
We don't have proper recycling units for batteries which will harm the environment a lot... Sab churan hai gaddi bech ne ka in the name of environment
Any one agree ?

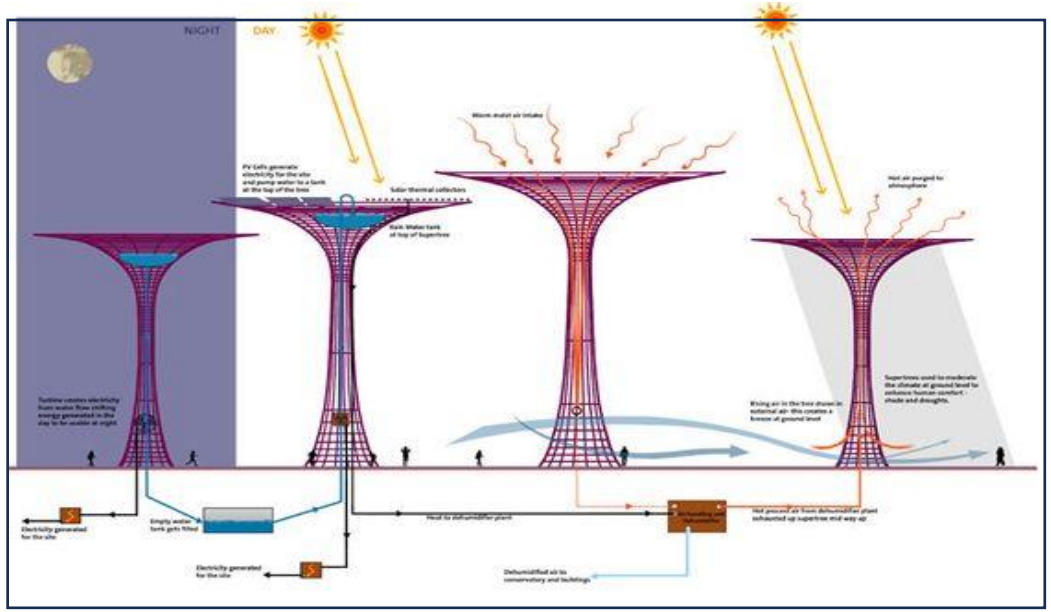
@ChiragPY_tweets

Push towards #EV is real
Thoughts about its eco-friendliness??
.
Yes electricity is renewable
But most of India's is acquired from coal
.
Lithium mining for is also harmfull for environment
.
Ik we need an alternate for ICE vehicles
just wondering if it's right time for push.



The Indian Index @Indian_Index · Sep 15

🚗🔌🌱 Incredible growth! Electric **vehicles (EVs)** now account for 6.45% of total vehicle registrations in **India!** 💪

2023*: 6.45%
2022: 4.6%
2021: 1.8%
2020: 0.71%
2019: 0.73%
2018: 0.5%

It's not going to happen! First, there's not enough infrastructure to support electric vehicles. And how do you make electricity? Coal!
The very thing that environmentalists say they hate most!
That is just one of the many reasons EV's will not be as popular as they say

Data accuracy and quality can be a concern
Ethical considerations and data privacy must be addressed.
challenges
Analysing large volumes of data requires specific technical skills.
More research is needed to assess the long-term impact of social media analytics on urban transportation planning.

Conclusion

Overall, leveraging social media analytics holds immense potential for revolutionizing urban transportation planning. By embracing this innovative approach and addressing existing challenges, transportation authorities can create more efficient, sustainable, and equitable transportation systems that cater to the needs of all citizens.

THANKYOU
